DATA & AI

A Microsoft Fabric data warehouse for Talksure

A secure, scalable Microsoft Fabric data warehouse on Azure that gives Talksure a single, accurate view of their data to drive decisions.

01

THE CHALLENGE

Talksure knew their data mattered and that good decisions depend on accurate insight, but the data was scattered across several sources with no single, reliable view.

02

THE APPROACH

Working closely with Talksure, we designed a data model around their business needs and chose the right technology to support it. We extracted, transformed and loaded data from their various sources, put data-quality checks and validation in place, and built reports and dashboards for business stakeholders. The whole thing runs on Microsoft Fabric on Azure, which keeps it secure, scalable and cost-effective.

03

THE OUTCOME

Talksure now has a working data warehouse that brings their sources together in one place, improves data accuracy and quality, and gives them a timely, joined-up view of their operations and customers to make decisions from.

04

SUMMARY & BENEFITS

- ✓ Ingests data from multiple sources into one central, holistic view.
- ✓ Scales to large data volumes and complex queries on Azure.
- ✓ Improves data accuracy and quality for better-informed decisions.
